DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

2. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

3. Claims 1-20 and 22-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Brehm et al., U.S. Patent No. 5,700,576 (hereinafter "Brehm"). Brehm teaches a coating

composition comprising a prepolymer comprising an alkyl (methacrylate) and sulfur compound containing at least three thiol groups, multifunctional acrylates, thinner (diluent), UV-initiator and customary additives. See Brehm, Abstract; col. 3, lines 23-60. Brehm also teaches the use of TPMA, 2,2,3,3-tetrafluoropropyl methacrylate. See Brehm, Table 1. The present invention differs from Brehm in that the present invention requires 0.2 to 10 wt.% 3,3,4,4-tetrafluorobutyl methacrylate.

4. The basic requirements of prima facie case of obvious are: (1) there must be some suggestion or motivation, either in the reference themselves or in the knowledge generally available to one of ordinary skill in the art, to modify the reference or to combine reference teachings; (2) there must be a reasonable expectation of success; (3) the prior art reference (or references when combined) must teach or suggest all the claim limitations. See MPEP 2143. "There are three possible sources for a motivation to combine references: the nature of the problem to be solved, the teachings of the prior art, and the knowledge of persons of ordinary skill in the art." See In re Rouffet, 149 F.3d 1350, 1357, 47 USPQ2d 1453, 1457-58 (Fed. Cir. 1998). Although Brehm discloses a homologue of the claimed

fluoroalkyl (meth)acrylate, based on the specification as a whole a polymer chemist of ordinary skill in the art would be motivated to modify Brehm by making a one carbon extension on the side chain of the fluoroalkyl (meth)acrylate. Such modification would be obvious because one would have a reasonable expectation of success that 2,2,3,3-tetrafluoropropyl methacrylate taught by Brehm would be similarly useful and applicable the fluorobutyl (meth)acrylate. Therefore, claims 1-20 and 22-23 are deemed as being unpatentable over Brehm.
